### Customer Paging

Onsite, Wireless, and Silent, our paging systems help ensure waiting customers are seen quickly and efficiently in a professional environment. Customers that arrive needing to speak with a personal banker, are given a pager. When it's time to be seen, their pager number is entered into a transmitter and they are notified.

*T7450A Transmitter*

### Staff Paging

Keep staff connected and communication. Easily locate staff for phone calls, appointments or meetings. Each staff member is given a pager and when they are needed they can be easily reached. This system has key features such as:

Telephone Interconnect, which enables paging from any phone in the building and Group Paging which allows the contact of a specific group of staff simultaneously.

*Alphanumeric Pager*

### Wireless Staff Alert

In conjunction with staff pagers, a small, mountable transmitter serves as the foundation of our wireless alert system. A transmitter can be mounted at each teller station and when the teller needs assistance or has a sercurity concern, a push of the button is all it takes to page the appropriate personnel. The system can be programmed with custom messages or can use standard pre-intalled messages. It can also be setup to monitor the opening and closing of entrances and exits.

### Electonic Customer Survey

Customer perceptions and marketing demogrphics are just a coule examples of data our Electtonic Survey System can gather. And, the great thing is the data is real time all the time. The surveys can be customized, internet integrated, scheduled and analyzed. Teh surveys are sustomers complete surveys are created using your PC, then downloaded to the trays. As customers complete surveys they are uploaded to either your computer or an online database.
